

CANCER SCREENING AND EARLY DETECTION PROGRAM — 2026

1. Executive Summary

The **Cameroon Cancer Foundation (CCF) Cancer Screening and Early Detection Program 2026** is a national initiative designed to expand access to **free cancer screening, early detection, cancer education, and community awareness** across Cameroon. Building on CCF's previous screening activities, the 2026 program will take cancer screening closer to communities, particularly populations with limited access to organized cancer screening and specialist oncology services. The program will focus primarily on **breast cancer, cervical cancer, and prostate cancer**, while using each screening campaign as an opportunity to educate communities about cancer prevention, warning signs, risk factors, HPV vaccination, and the importance of seeking medical attention early. CCF plans to conduct screening campaigns in at least **seven regions of Cameroon during 2026**, with a target of **at least 3,500 free cancer screenings**.

2. Mission: To reduce cancer-related morbidity and mortality in Cameroon by improving access to cancer awareness, prevention, screening, and early detection, particularly among underserved populations.

3. Vision: A Cameroon where people understand their cancer risks, have access to appropriate screening, and cancers are increasingly identified at earlier and more treatable stages.

4. 2026 Program Objectives: The Cancer Screening and Early Detection Program will:

1. Provide at least **3,500 free cancer screenings** during 2026.

2. Conduct organized screening campaigns in at least **seven regions of Cameroon**, including the Littoral, North West, South West, Centre, Adamawa, North, and Far North Regions.
3. Focus screening activities primarily on **breast, cervical, and prostate cancers**.
4. Strengthen community education on cancer prevention, risk factors, warning signs, and early detection.
5. Promote awareness of **HPV infection, cervical cancer prevention, and HPV vaccination**.
6. Develop partnerships with corporations, schools, universities, community organizations, health facilities, traditional and religious leaders, and other institutions to extend the reach of cancer screening.
7. Establish appropriate referral pathways for individuals with suspicious screening findings requiring further investigation.
8. Collect and analyze screening data to improve future cancer prevention and early-detection programs in Cameroon.

5. Screening Activities Breast Cancer: CCF will provide breast cancer education and appropriate screening activities, including clinical breast examinations and referral of individuals requiring additional investigation. Community education will emphasize breast awareness, recognition of suspicious changes, and the importance of seeking professional evaluation when abnormalities are identified.

Sensitization, Screening, Treatment, Technical Assistance, Research

Cervical Cancer: The program will provide cervical cancer screening and education for eligible women. Activities will also emphasize the relationship between human papillomavirus (HPV) and cervical cancer, prevention of HPV infection, and the benefits of HPV vaccination.

Prostate Cancer: Eligible men will receive prostate cancer education and screening based on the screening protocols adopted for individual campaigns. Participants with suspicious findings will be referred for further clinical evaluation.

6. Cancer Awareness and Community Education. Screening will be accompanied by a major educational component. CCF will use community seminars, schools, universities, workplaces, radio, television, social media, churches, community organizations, and public events to increase cancer awareness.

The program aims to conduct at least **50 community education and sensitization activities** during 2026.

Educational topics will include cancer risk factors, healthy lifestyles, early warning signs, the importance of screening, HPV and vaccination, breast awareness, and the importance of obtaining medical evaluation when symptoms or abnormalities are identified.

7. Reaching Communities Across Cameroon

The 2026 program will prioritize both urban and underserved communities. Planned regions include: **Littoral • Centre • North West • South West • Adamawa • North • Far North**. CCF will work with local healthcare professionals, community leaders, hospitals, schools, corporations, associations, and volunteers to organize campaigns appropriate to each community.

8. Corporate and Institutional Screening Partnerships: CCF will seek partnerships with at least 10 corporations and institutions, particularly in Douala and Yaoundé, to provide workplace cancer education and screening. Corporate partners may support screening through sponsorship, employee participation, logistics, transportation, medical supplies, communications, or direct financial contributions.

9. Referral and Follow-Up

Screening is only effective when abnormal findings lead to appropriate follow-up. Participants with suspicious findings will be counseled and referred for appropriate diagnostic evaluation. Where specialist oncology assessment is required, CCF may coordinate referral through its technical and clinical partnership with the **Cameroon Oncology Center (COC)** and other appropriate healthcare providers. Screening results will also be documented to support follow-up, program evaluation, and research.

10. Data Collection and Research

CCF will maintain structured data from its screening campaigns to evaluate:

- Number of people sensitized
- Number of individuals screened
- Type of cancer screening performed
- Demographic and geographic distribution
- Number and type of suspicious findings

- Referral and follow-up outcomes, where available
- Knowledge and attitudes regarding cancer prevention and screening
- HPV awareness and vaccination knowledge where applicable

Aggregated and appropriately managed data may be analyzed to improve screening programs and contribute to scientific research on cancer prevention and early detection in Cameroon.

11. 2026 Key Performance Indicators

Indicator	2026 Target
Free cancer screenings	≥3,500
Regions reached	≥7 regions
Community education/sensitization activities	≥50
Corporate/institutional screening partnerships	≥10
Major cancers targeted	Breast, Cervical & Prostate
Screening data collection	100% of campaigns
Referral pathway for suspicious findings	Established for every campaign

12. Proposed 2026 Screening Program Budget

Budget Area	Estimated Amount (FCFA)
Cancer Screening Campaigns	30,000,000
Cancer Awareness & Education Campaign	5,000,000
Total Proposed Screening & Awareness Budget	35,000,000 FCFA

The budget may support screening supplies, medical consumables, transportation and field logistics, educational materials, community mobilization, communication, data collection, and other costs directly associated with implementing cancer screening and awareness activities.

13. Partnership and Funding Opportunity

CCF invites **corporations, foundations, development partners, healthcare organizations, diaspora organizations, philanthropists, and individuals** to support the 2026 Cancer Screening and Early Detection Program.

Partners may sponsor an entire regional campaign, a community screening event, specific screening services, educational activities, medical supplies, transportation, or other components of the program.

14. Our Commitment

Early detection saves lives.

CAMEROON CANCER FOUNDATION

Compassion & Companionship

Sensitization, Screening, Treatment, Technical Assistance, Research

The Cameroon Cancer Foundation is committed to taking cancer prevention and early detection closer to the people who need it most. Through education, screening, referral, partnership, data collection, and research, CCF seeks to identify cancer earlier and reduce preventable cancer deaths in Cameroon.
